Minol will install a utility meter in each apartment.

A compatible utility meter installed in each apartment is connected to an Inovonics Wireless transmitter. The transmitter converts the meter read into a digitized signal for transmission.

Repeaters are placed at strategic locations across the site

Repeaters, placed at strategic locations across the site, receive and verify signals from the transmitters and amplify the signals for transmission to the receiver.

The DCC, typically located in the leasing office, receives transmissions from the receiver

The Data Concentrator and Communicator (DCC) receives transmissions from the receiver and stores the data for retrieval by TapWatch software.

Minol will access the data remotely

Minol will access the data remotely using high-speed modems with TapWatch Software.
