

## Minol's Leak Detection Can Prevent Your Revenue from Going Down the Drain

*A leaking toilet can waste up to 90,000 gallons of water in 30 days.\**

Detecting leaks isn't always as easy as identifying a leaky faucet. Silent leaks that occur in toilets, hot water heaters, walls and floors are the most devastating and costly to a property. Most properties don't know these leaks are occurring until they receive a substantial water bill and either have to absorb the expense or pass back to the residents.

Utilizing LeakDetect™ technology, the Minol team can help identify costly leaks in apartment homes before they impact your bottom line.

- Real time leak detection for properties submetered for water.
- Detect leaks in both occupied and vacant units.
- Avoid disputing large resident bills and losing revenue through courtesy credits.
- Receive daily, automatically generated emails with leak detection alarms to designated recipients at your property.
- Applicable for all Inovonics Wireless Based Systems.

*"We received an email that one of our apartments had a very high daily water usage amount. We went into the apartment, which was vacant, and the toilet was overflowing into the apartment below. Unfortunately, the resident was away for the weekend and wasn't able to call. If we didn't have the Minol leak detection report, things could have been much worse."*
